Planning the Location of the Machine

The following diagrams provide the details for positioning your new machine.

- ☐ No obstacles are allowed in the worksheet travel area and the ceiling must be at least 40" above the top of the machine.
- ☐ All of the maintenance areas recommended should be used, but you must at least ensure that the doors of the NC unit can be opened.
- ☐ The Vipros 357 machine and control must be protected from direct sunlight or other heat sources.
- ☐ The positioning of the Chiller is very flexible
